somfy®

EACH WINDOW COVERING ...

Like the ideal of motorised blinds, but want a simple solution? Then Somfy's WireFree™ range of solutions are for you. Motorised blinds powered by the WireFree™ range are as easy to install as the manual equivalent. So you can enjoy all the benefits of a motorised blind that can be installed in minutes with no disruption to your home décor.

Installed in minutes – no wires and no disruption to décor!

SOMFY INNOVATION

WireFree™ from Somfy

Simple to install

- It takes the same time to install a WireFree™ blind as it does a manual one.

No wiring

- No extra installation expenses and no damage to your décor.

Discrete

- The motor is hidden from view and the battery pack can be mounted behind the blind from view.

Flexible

- Re-chargeable batteries can be used to power your blind.

I can control daylight as I please.

A quick press on the 'My' button on the remote control handset adjusts the indoor blind to my preferred position. Just over half way down, then it stops automatically to allow enough light in to keep the room bright, but positioned low enough to cut out glare while I'm watching television. Perfect!

... HAS ITS OWN ...

Somfy has a comprehensive range of solutions to motorise all types of interior blinds, but there is only one solution for the more discerning home owner – Sonesse™! A quiet motor that you will barely hear as it adjusts your blinds to the desired position. Why not add a sensor so your blinds automatically adjust to filter the perfect light level while you relax in the comfort of your chair.

THERMOSUNIS INDOOR LIGHT
& TEMPERATURE SENSOR

So quiet, you won't even know they are moving!

SOMFY INNOVATION

Sonesse™ from Somfy

Quiet

- A blind powered by a Somfy Sonesse™ motor makes less noise than one operated manually. So quiet you will hardly hear it operating!

Smart

- Add sensors or timers for automatic adjustment of your blinds to protect furnishings or simulate occupancy.

Flexible

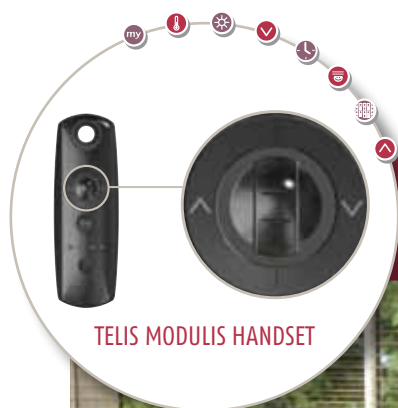

- Numerous solutions exist to allow your Sonesse™ powered blinds to seamlessly integrate with your home automation project.

My blinds protect my home and operate automatically – even when I'm not there!

My home is pleasant to be in all year round: it's bright but not dazzling, and the blinds help to maintain the right temperature. The light sensor automatically adjusts my blinds to the position required to protect my interior from the heat and to protect my furniture, carpets and house plants from the sun's rays. At any time, I can take over control with my remote control.

... S O M F Y ...

Glare causing a problem? Then take your Modulis handset and thumb the scroll-wheel control to tilt the slats to your preferred angle. The control can be set so that the slats tilt slowly as you rotate the scroll-wheel to reach the perfect position. You can even set your favourite slat angle and recall it at the touch of a single button!

Adjust Venetian blind slats with precision.

SOMFY INNOVATION

Modulis from Somfy

Precise

- A unique scroll-wheel handset allows you to adjust your Venetian blind slats to the desired angle for perfect daylight filtering.

Smart

- Set a particular slat angle, say 45°, as a preferred 'My' position and recall it at the touch of a button.

Flexible

- Control a number of blinds individually or as a group with the same remote handset.

EXCLUSIVE TO SOMFY

The "my" button

Enables a favourite position to be memorised. Pressing the "my" button will automatically send the blinds to this orientation.

My Venetian blinds are part of my décor and enable me to have privacy and control.

With the scroll-wheel of my remote control, I can tilt the slats to the position I want. During the day, I can filter the daylight to create my perfect ambience while reading. With a single click, I can vary the level of light coming in as I choose. When evening comes, the blinds are fully lowered so no-one can see into my house.

... SOLUTION.

From a simple project with a single blind to those more complicated involving multiple blinds, Somfy have the control solution to meet with your requirements. Our handset range is also available in a number of finishes – gloss white, silver effect and gloss black – to help you select the handset which will match your interior décor.

A range of Somfy controls for interior motorised blinds

REMOTE CONTROL HANDSETS

Centralis RTS & Situo RTS

WHY CHOOSE SOMFY?

Somfy drive units comply with European safety standards. They are designed and tested to stand up to several thousand cycles of use under the most difficult climatic conditions. Before they are installed in your home, 100% of Somfy products are tested on the production line.

Somfy guarantees its products for 5 years for its installer and manufacturer clients.

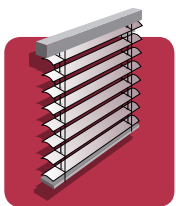

A complete range of solutions for interior motorised blinds

Convenience, safety and security using Home Motion by Somfy

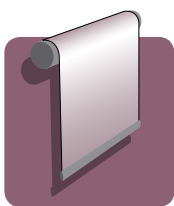

With Somfy's range of motor and control solutions, you can bring your interior blinds to life. With an automated solution for the majority of interior blinds and numerous methods to power them, Somfy have a system to meet the requirements of every user. Automated blinds offer a number of advantages in comparison to the manual versions. For example, motorised blinds provide the following benefits:

- Easily adjust hard-to-reach window blinds,
- Enhance child safety by eliminating the need for pull cords that are required for manual blinds,
- Fine-tune daylight, manage glare and operate blinds to adjust the light level to your preferred ambience,
- Automatically protect valuable furnishings from the sun's rays,
- Maintain your privacy and enhance security with the addition of automatic timers and sensors,
